

Introduces the:

# EASYPULL<sup>®</sup>

World's best winch & front restraint system

# EASYPULL<sup>®</sup>

World's best winch & front restraint system

The EasyPull is designed to pull a wheelchair and passenger into a vehicle and directly secure the wheelchair. This eliminates the caretaker from physically pushing and securing a wheelchair inside a vehicle.

## Safety

Because the EasyPull is not only a winch but also a front restraint system, it has been tested and approved according to the ISO 10542 requirements. Another important safety feature is the indication buzzer. The buzzer will make a sound when the belts are locked and the wheelchair is in the right position. The quick release tongue and buckle, which connect the wheelchair to the EasyPull, can always be released, even when there is no power.

## Comfort

Due to the compact design the EasyPull will easily fit all wheelchair accessible vehicles. With the standard wireless remote control the EasyPull can be operated and the four meter long belts will guarantee a safe and easy access. The powerful motor is capable to pull a 200kg wheelchair with ease and with the automatic alignment of the belts, this always happens in a straight line. Adjustable end-stops on the front of the belts will ensure an optimum position of the wheelchair inside the car.

## Features

- Tested according to ISO 10542
- Compact design
- Adjustable end-stops
- Wireless remote control
- Four meter belts
- 'Locked' indication buzzer
- Two speed levels
- Quick release tongue and buckle
