

OPUS 5 HOSPITAL CONCEPT

The OPUS 5 bed concept is a brand new and cutting edge care bed manufactured by the Danish company KR.

KR has worked with the Central Denmark Region, Randers Regional Hospital and several other partners to develop an intelligent hospital bed for the future - a bed that challenges status quo and optimises work processes in and around patient care.

With the OPUS 5 product line, manufacturer KR has launched a brand new generation of hospital and care beds. The concept is meant to improve hospital efficiency and economy by not customising ICU beds, ward beds, bariatric beds etc.

At an OPUS 5-hospital or -ward, all the beds are the same. They start out the same and with the use of ad-on accessories, the service department can easily transform the OPUS 5 bed to suit any patient - from specialised intensive care patients to dialysis or maternity care. This means, that the right bed is always available for the patient, with a minimum of effort and maximum of value for money.

AREAS OF FOCUS IN THE DEVELOPMENT PROCESS

- Working environment
- Patient self-assistance
- Staff efficiency
- Comfort
- Safety
